DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I: Claims 1-17 drawn to a method for inferring a network relationship between genes and a medium containing one or more results of network relationships between genes, classified in class 702, subclass 019.

Group II: Claims 18-26 drawn to a method for determining the statistical significance of network relationships, classified in class 702, subclass 019.

The inventions are distinct and divergent, each from the other because of the following reasons:

The inventions of Group I and Group II are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions of Group I and II have different modes of operation.

The invention of Group I is directed to a method for inferring a network relationship between genes comprising steps of creating a sparse matrix, generating differential equations, and solving said equations to produce a network relationship between genes. Furthermore, Group I is directed to a medium containing results of network relationships between genes and distinct differential equations not disclosed in Group II. The invention of Group II is directed to a method for determining the statistical significance of network relationships comprising steps of calculating a distinct log-ratio expression, calculating the standard deviation, calculating a

distinct joint probability, and adopting statistical criteria to determine a significant result. Group II also recites distinct mathematical equations that are not disclosed in Group I. For these reasons Groups I and II have different modes of operation. Therefore, the burden of search is maintained as the examination process requires a search of non-patent literature, U.S. patent publications, U.S. patents, as well as foreign patent literature.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
